Introducing the Most Advanced Performance Exhaust Product Line for Premium Automobiles

Why GTHAUS?

Style, sound, performance, and build quality. From the start, we have strived to set our brand above the rest. We've accomplished this by combining these key components: Sound, Performance, and Build Quality.

Style

GTHAUS Premium exhaust systems utilize traditional and modern styling to create the world's most advanced exhaust system. From the high polish exterior finish to the meticulous hand welds, GTHAUS exhaust systems look as beautiful as they sound.

Sound

Meisterschaft, MUSA, and American Roar Racing exhaust systems provide the most unique exhaust notes in the industry, period. Our exhaust systems are custom tailored for each specific vehicle without the use of any universal parts. Countless hours of R&D go into each vehicle to achieve the perfect pitch unique to each vehicle. The result is an exhaust system that is as fine tuned as a fine musical instrument, delivering an exotic, unique, and aggressive sound.

What is the difference between GTS and GTC?

GTHAUS GTC (EV & VC Control) exhaust systems are the world's most technologically advanced units on the market. The GTC exhaust system utilizes electronic valve control to "open" and "close" the exhaust system. This allows the user to control the sound level, exhaust back pressure, and overall vehicle performance.

The GTHAUS GTS (Ultimate Performance) exhaust systems are engineered for enthusiasts who want a no nonsense exhaust system that will perform and produce a superior sound at all times.

Performance

Our Meisterschaft, MUSA, and American Roar Racing exhaust systems are engineered to provide maximum power gain at the wheels. Power gains are realized using a state-of-the-art all-wheel-drive Mustang Dynamometer at our in-house research and development facility. Performance can be maximized if GTHAUS rear muffler sections are used in conjunction with optional mid-pipe section(s) and/or catalytic replacement section(s).

Weight Savings

GTHAUS exhaust systems are significantly lighter than the Original Equipment Manufacture (OEM) unit's overall carrying weight. GTHAUS stainless steel (SUS) exhaust systems typically weight 35% to 50% less than the OEM units. In addition to our stainless steel exhaust system, our titanium (Ti) exhaust system offers a weight reduction of 75% to 80% when compared to the OEM unit.

Build Quality

Meisterschaft, MUSA, and American Roar Racing exhaust systems are 100% hand-built. Each exhaust system is carefully TIG-welded by our artisan fabricators using only the best available materials. Our stainless steel (SUS) systems are produced using Type 304 stainless steel and high grade titanium alloy for our Titanium (Ti) exhaust systems. Using high grade materials enhances the durability and lifespan of the exhaust system. As such, GTHaus exhaust systems do not suffer from corrosion when exposed to the elements, so there's no need to worry about rust developing over time.

GTHAUS exhaust systems utilize the highest quality and most durable glass wool pack. Using the best materials allows GTHAUS exhaust systems to endure the extreme temperatures and conditions it faces on a daily bases which aids to the longevity of the exhaust systems.

Quality Assurance

GTHAUS exhaust systems go through a series of vigorous inspection and testing to assure the highest quality product. Units are pre-tested and quality control checked at every step of the manufacturing process. All final inspections are performed by chief engineers to guarantee perfection.

Premium Materials

GTHAUS uses only the highest grade T304/T316 stainless steel sourced from POSCO to create GTHAUS stainless steel (SUS) exhaust systems. Premium titanium alloy from Nippon Steel and POSCO are used in the construction of GTHAUS titanium (Ti) exhaust systems.

Product Selections

GTHAUS is the Global distributor of GTHAUS Premium exhaust systems. GTHAUS products are sold in various performance levels, tip styles and finishes to suit individual specifications and requirements.

Power Gains by Reducing Back Pressure

GTHAUS exhaust systems help reduce internal engine heat and back pressure by improving exhaust scavenging from the combustion chamber. The free flow designs of GTHAUS exhaust systems help minimize the fundamental power robbing effects commonly found with the restrictive OEM exhaust system.

The Negative Effects of Back Pressure

Back pressure is a prominent characteristic of an aftermarket exhaust system. The back pressure in an exhaust system allows for a reduction in overall sound volume but limits engine power when spent exhaust gases are backed into the combustion chamber thus contaminating the next burn cycle. The inefficient burn cycle limits the potential power output of the engine.

A second issue associated with back pressure is heat build-up. This typically occurs in an OEM style chamber muffler. Hot exhaust gases travel through louvers and into dead-end chambers. The heat builds up in the muffler which then travels back through the entire exhaust system to the exhaust manifold and engine. The heat retention causes damage to the entire exhaust system as well as the catalytic converter, manifold and even the gaskets.

GTHAUS Solution to back Pressure

GTHAUS exhaust systems are designed to reduce back pressure while maintaining a rich powerful exotic tone. Non-friendly “droning” exhaust frequencies are carefully dismissed by setting natural frequency at upper ranges as well as dampened with a dense wall of acoustical absorbing material inside the canister. The straight-through design prevents excessive heat retention allowing the entire system to run cooler and last longer.

MOPAR Official License Product Announcement

AMERICAN[™]
ROAR RACING

**OFFICIAL
LICENSED
PRODUCT**

It is with great excitement and pride to announce our partnership with FCA (Fiat Chrysler Automobiles) as our American Roar Racing (Subbrand of GTHAUS) product line for Jeep and Dodge models are now official MOPAR licensed products. MOPAR Enthusiasts will now have access to equip their vehicles with GTHAUS' American Roar Racing High Performance Exhaust systems directly from 1500+ Major FCA (Jeep & Dodge) Dealerships nationwide.

Attention from the FCA Group doesn't come easy – which is why we are absolutely thrilled to have our American Roar Racing product line recommended by the FCA Group to be added to the MOPAR Family of quality high performance parts.

GTHAUS is a leader in the high performance automotive aftermarket industry. With visions to expand beyond the niche European and Exotics market, the American Roar Racing brand was created 10 years ago, exclusively catering to the Muscle Car Division of GTHAUS. With its innovative, forward-thinking, product design with superior construction, meticulous hand-crafted welds, and precision sound frequency tuning, the American Roar Racing product line quickly gained popularity yielding aggressive demand within the American Muscle Car scene. All system components are produced using the highest quality stainless steel (T304) and Titanium Alloy available in the industry and is backed with an industry leading Warranty. From New Product Design Planning, R&D, Q.C. Inspection, Final Assembly, Order Fulfilment, to Sales and Customer Service, all proudly performed from our Headquarters located in Chicago, IL.

GTHAUS will continue to support direct and indirect sales through GTHAUS.COM, its existing Authorized Performance Dealer network worldwide, in addition to major Jeep & Dodge Chrysler Dealerships.

Thank you for all your support throughout the years. We look forward to serving all of our customers and distribution partners with innovative advancements to our products for many more years to come.

1. PERFORMANCE / SOUND LEVELS

In the early stages, we offered one set of performance type exhaust system per vehicle. However, not all customers had the same preferences when it came to performance and sound levels. By listening to our customers and focusing exactly on what they wanted to achieve, we were able to develop several variations listed below – catering to the ideals of each and every customer.

HP (Touring Performance) is moderate sounding and the least aggressive system offered in the Meisterschaft line, still yielding solid performance gains and a subtle yet noticeable increase in exhaust tone over the OEM system. Formulated for a mature crowd, the HP system creates a great tone but remains non-intrusive – perfect for daily driving.

Sound level 4/10 (Moderate)

****NOTE:** OEM Exhaust Sound level being 2/10

BMW E9X M3 GT unit shown

GT (Racing Performance) is one of the most popular in our line-up. Providing an aggressive sound and the same solid performance gains, the GT Racing is a safe choice for anyone in search of the perfect aftermarket exhaust. The GT system definitely brings on additional fun factor of driving your vehicle either at the race track or on the street!

Sound level 6/10 (Aggressive)

GT2 (Racing Performance) provides great performance gains and an exotic high pitch tone, similar to, but more aggressive in volume than the GT Racing. GT2 is truly an exciting product in both sound and performance aspects. Great for use at the race track and excitably aggressive for the street!

Sound level 8/10 (LOUD)

SGT (Super GT – Track Performance) is intended for the diehard type. Simply put, this system is for the purist: the simplest and lightest format of exhaust system which is suitable for racing type applications.

For Super GT exhaust development, our engineers went back to the drawing board, focusing solely to create a system that is the lightest in weight and delivers maximum performance gain. Utilizing extremely free-flowing designs in all aspects, our Super GT exhaust systems were created and intended for race track use. The Super GT is the best performing Meisterschaft exhaust.

Sound level 9/10 (Racing type)

BMW E9X M3 SGT unit shown

****Sound Level Chart:**

				GTS					
GTC									

Introduction of the GTS & GTC

Continuously innovating and progressing forward, the GTC (EV Control) and GTS (Ultimate Performance) were introduced, ultimately taking the place of the HP through GT2 for all newer model vehicles.

The GTC, utilizing electronic and vacuum valve technology to control sound, back pressure, and overall performance, became a single combined solution, enveloping everything from OEM all the way to GT2, a complete spectrum of sound and performance into one unit by the use of our electronically controlled variable chambers. GTS is still an option for those chasing after a pure, aggressive exhaust note without controllable valves.

GTS (Ultimate Performance) provides an exotic & aggressive exhaust note as well as ample performance gains across the board; the GTS is the perfect choice for those looking for a straight forward – install and go exhaust system. The Meisterschaft GTS does not feature valve control.

GTS model shown

GTC (EV Control) Utilizing our E.C.V.C (Electronically Controlled Variable Chamber) technology, the Meisterschaft GTC uses an electronic valve system to control the volume and tone of the exhaust system at the users will. In the fully open position, the Meisterschaft GTC provides the most exotic, aggressive exhaust note similar to conventional GT2 systems we have offered. When in the closed position the GTC system will produce a sound comparable to OEM. The Meisterschaft GTC provides the best of both worlds.

GTC model shown

Wireless Remote Control

Upgrade your GTC-EV (Electric Valves) system with a wireless remote solution that replaces the standard hardwired toggle switch. Wireless Remotes come equipped with both convenient one-touch and momentary operation, putting you in control of partial to wide open valve settings. This package includes a 12V Receiver and Two Key Fobs.

Wireless Remote Control unit shown

OE-C (Original Equipment Control) NEW

Recently, vehicle manufacturers have begun to include valve-controlled exhaust systems right off the production line, which are adjustable via a button on the dashboard, or even within driver mode selections (Comfort, Sport, etc.).

To accommodate the current trends, our exhaust systems for these vehicles are now designed with specialty components, allowing a plug and play replacement that retains the use of OE-C sport exhaust functions (whether they are vacuum-solenoid controlled or electronic motor controlled). As such, customers can still enjoy and benefit being able to use the OE switch to control our exciting GTHAUS exhaust products.

2. MATERIALS

Stainless Steel (SUS)

T304/T316 high grade polished stainless steel.
Durable, corrosion resistant. Perfect for the everyday driver.

Titanium Alloy (Ti)

100% Premium titanium alloy.
Extremely lightweight, highly recommended for track & racing applications

3. TIP STYLES

Depending on the vehicle application, several different tip styles are offered to suit each customer's individual taste. Optional finishes are also available for further customization.

SR
Separated Round

SO
Separated Oval

OE
Utilizing OE Tips
(Built into the bumper)

OPTIONAL FINISHES

STANDARD FINISH
Polished Stainless Steel

MOPAR Official License Product Announcement

**AMERICAN[™]
ROAR RACING**

**OFFICIAL
LICENSED
PRODUCT**

It is with great excitement and pride to announce our partnership with FCA (Fiat Chrysler Automobiles) as our American Roar Racing (Subbrand of GTHAUS) product line for Jeep and Dodge models are now official MOPAR licensed products. MOPAR Enthusiasts will now have access to equip their vehicles with GTHAUS' American Roar Racing High Performance Exhaust systems directly from 1500+ Major FCA (Jeep & Dodge) Dealerships nationwide.

Attention from the FCA Group doesn't come easy – which is why we are absolutely thrilled to have our American Roar Racing product line recommended by the FCA Group to be added to the MOPAR Family of quality high performance parts.

GTHAUS is a leader in the high performance automotive aftermarket industry. With visions to expand beyond the niche European and Exotics market, the American Roar Racing brand was created 10 years ago, exclusively catering to the Muscle Car Division of GTHAUS. With its innovative, forward-thinking, product design with superior construction, meticulous hand-crafted welds, and precision sound frequency tuning, the American Roar Racing product line quickly gained popularity yielding aggressive demand within the American Muscle Car scene. All system components are produced using the highest quality stainless steel (T304) and Titanium Alloy available in the industry and is backed with an industry leading Warranty. From New Product Design Planning, R&D, Q.C. Inspection, Final Assembly, Order Fulfilment, to Sales and Customer Service, all proudly performed from our Headquarters located in Chicago, IL.

GTHAUS will continue to support direct and indirect sales through GTHAUS.COM, its existing Authorized Performance Dealer network worldwide, in addition to major Jeep & Dodge Chrysler Dealerships.

Thank you for all your support throughout the years. We look forward to serving all of our customers and distribution partners with innovative advancements to our products for many more years to come.
